

SpecTec and Bureau Veritas invite you to a joint presentation at Posidonia:

The unified Next Generation Asset Management solution

**Wednesday, June 6th from 15:00-16:30
Hall 2, Room 2A**

SpecTec and Bureau Veritas Marine and Offshore SAS have signed a collaboration agreement that sets out future bidirectional communication between SpecTec's AMOS solution and Bureau Veritas' Asset Integrity Management System, Veristar AIM3D.

This strategic technology collaboration brings together two extensively adopted global solutions that form an advanced system for the Integrity Management of fleets in the Marine and Offshore markets.

Leveraging the combined strength and value of proven solutions enables customers and the wider market to benefit from a unified solution that enhances Inspection, Maintenance and Repair (IMR) activities for their fleets. This is supported with intuitive user interfaces and user experiences, coupled with comprehensive smart data analysis and measurement, which promotes informed decision making and shapes future strategic thinking.

Tim Rosenberger, Director of Global R&D for SpecTec said, "The combination of state-of-the-art technologies, supported by shore side cloud services and vessel based offline data replication, caters for the holistic and efficient planning of activities and availability of relevant data anywhere and anytime."

Led by Mr Jose Esteve, Bureau Veritas Project Director and Mr Tim Rosenberger, SpecTec Director of Global R&D, the presentation provides an insight into the major strategic benefits of this collaboration and technology for the market, as part of Posidonia 2018. A Q&A session will be hosted at the end of the presentation.

Register for your complimentary seat today by filling in the Registration form at <http://www.spectec.net/spectec-and-bureau-veritas>

We look forward to seeing you in Athens.

Regards
